

Installation & Set-up Instructions

- 1) Please let your Titan Solar Light sit in the box, until the batteries are installed. This will protect the LED's under the light from any possible damage. Please save your box so it can be used to store your Solar Light, as well as a protective holder for changing the batteries.
- 2) Un-package the batteries and set them aside.
- 3) Using a Phillips screwdriver, carefully remove the 4 Phillips screws on top of the solar light. **(Pic #1)**
- 4) Carefully lift off the top Solar cover of the light and set down next to bottom section, being careful not to disconnect or damage the wiring. **(Pic #2)**
- 5) Remove battery cover and install the 3 batteries provided. Be sure to face each battery in the proper direction, and be sure that the batteries are firmly seated in the battery box. Replace the slide-on battery box cover which will snap into place. There is no screw needed. **(Pic #3)**
- 6) Carefully re-install the top cover of the Titan Solar Light with the 4 screws, and be sure not to crimp any wires as you tighten down the screws. **Please be sure to tighten the 4 screws, until the rubber washers are compressed.** (This will prevent water from entering the light)
- 7) You can now remove the Solar Light from the box. (Please save your box)
- 8) Attach the Titan Solar Light to your flagpole using your gold ball or Eagle. Use the existing nut under the solar light and tighten down firmly against the top of your flagpole. This will secure the light from loosening up. **(Pic #4) It may take several sunny days to fully charge the batteries.** The LED lights will automatically turn on and off by themselves. On darker, cloudy days, the Titan Solar Light will receive less of a solar charge. This will result in less light on your flag that night. Temperatures below freezing will also result in reduced light output from the Solar Light.

***Warranty-** The Titan Solar Light has a 2 year limited warranty. (Excluding batteries, damage, neglect, or postage) This warranty is not transferrable, and does not cover the batteries. Call us with any questions about your Solar Light. Thank you for your purchase, and enjoy your Titan Solar Light!

Attention Eagle Owners!

If you have an eagle ornament, you must remove the gold ball from the shaft of the eagle.

It is normal for the solar light to rotate freely on the shaft of the eagle OR the gold ball ornament.

Note: Please use the nut under the light to hold in place. Check eagle periodically for any loosening from the wind.

Important Battery Information!

- 1) If you decide to temporarily store your solar light, please be sure to take out all of the solar batteries and store them in a cool, dry location.
- 2) The solar rechargeable batteries will perform less than normal, in below freezing weather. Any shade such as trees, bushes, or structures, will affect the charging of the batteries. The batteries included with the solar light, are not covered under our warranty.
- 3) The solar rechargeable batteries should be available in your area. You can also purchase them from your local Titan Solar Light dealer. Please take a battery with you to the store, so you can purchase the same "type" of batteries.

***Battery Description: (3ea) AA Solar Rechargeable NiCd, 1000 mA**

- 4) Standard AA batteries will not work.
- 5) When installing your batteries, always check to see that the batteries are facing the proper direction.
- 6) Artificial light will not charge the solar batteries, only good sunlight.
